Bean has a comfortable padded seat and legs in chrome, or black or silver grey powder-coating. The bar stool's bean-shaped seat determines the way most men and women choose to sit on it. Men generally sit astride the stool, using it like a saddle, while women generally choose to sit long-ways, giving a broader seat. The Bean bar stool indicates that men and women use furniture in different ways - something that has never previously been noted in furniture design. Bean is available in both bar and counter height versions.
