

Classic X-Line Modern Outdoor Stacker

X-Line was designed 1977 by Danish Architect Niels Jorgen Haugesen. The chair very quickly acclaimed status as a true furniture classic. The X-Line chair made from 8mm steel rod and perforated steel plate is a minimum construction both in terms of materials and manufacturing. The chair itself is almost a diagram of the forces that work in it. A visible logic that adds to the chairs identity and aesthetic form. The chair comes in chrome or powder coated in several colors. The chair is stackable up to forty (40) high.
